**MODULAR WALKWAY
SHELTER SYSTEMS**

WHAT IS RAPID COVER?

WHY CHOOSE MODULAR?

RAPID COVER™ is a breakthrough solution redefining industry practice for general shelter requirements.

Utilising advanced fabric technology and frame designs, RAPID COVER™ is the ideal modular alternative to conventional timber and cladding structures, saving on resources, cost and waste.

Through smart design and long-term industry experience, RAPID COVER™ provides a zero waste system, delivering comfortable and sheltered spaces for office, rest-break, and meeting areas in all weather.

Pre-engineered for Australian conditions

Rigorously tested materials and designs, RAPID COVER™ is built to survive and shield from harsh wind, rain and heat conditions.

Certified and compliant with AS1170.1 and AS1170.2 Wind Loading Codes and AS4100 Steel Structures.

Easy to install and relocate

Specifically designed to be easily and quickly installed by most site contractors.

If required, supervisors and installation teams are available nation-wide.

Control costs

Providing you with a long-term asset, driving efficiencies within your company over single and multiple projects.

A reusable structure with engineered steel and fabric reduces site waste disposal and promotes sustainability values.

Project flexibility

Caters for easy adjustments depending on individual project circumstances.

Whether uneven ground, varied building heights or a pitched roof, a functional and efficient result is guaranteed.

Reduce waste / truly sustainable

Timber structures are often temporary. Timber is in high demand and creates a high environmental impact for production and waste. The RAPID COVER™ asset is re-useable and offers ongoing cost reductions in site budgets.

Minimise asset damage

Previous walkway shelter options require fixings into portable buildings or concrete ground supports.

Certified nylon strapping and rooftop mounts replace this with zero cladding penetration, reducing leaks, corrosion and damage fees.

Protecting your most important asset - your people

PROTECTED SPACE MADE EASY

FABRIC COVERS
Provide natural light and a cooler environment

EXPANDABLE
Add 3-metre modules together over any required length

ADJUSTABLE HEIGHT
Flexible for any roof pitch

ADJUSTABLE WIDTH
For walkway width preference

ZERO FIXINGS
No tools required.
No bolts or screws into buildings

ADJUSTABLE STRAPPING
Secured to lifting point of hut

STRONG GALVANISED FRAME
For maximum life span

OPTIMAL VENTILATION
For every season

ONE SYSTEM FLEXIBLE OUTCOMES

EASY AND SAFE INSTALLATION

GROUND COLUMN SUPPORTS FOR OPEN WALKWAYS

CONCRETE FREE FOOTING

CONCRETE PIER

BALLAST - PRE-CAST CONCRETE

GROUND COLUMN WITH CABLE BRACING
